Netherlands

SUMMARY

I've taken on various main roles in game production, including Level Designer, Narrative Designer, Game Producer/Project Manager, and Unity Programmer. I'm experienced in team leadership and workflow management using Agile and Scrum methodologies, including sprints, daily stand-ups, and the MoSCoW prioritization framework. I'm proficient with Unity (C#), the Adobe Creative Suite, and various management tools. My work spans all stages of production, from conducting primary research and generating concepts to developing GDDs and creating prototypes.

FEATURED ACADEMIC PROJECTS

THE DARK SWORDSMAN, A DARK FANTASY, STORY-FOCUSED ADVENTURE GAME 2025

Project Owner (Game Designer, Unity Programmer, Visual Designer)

Developed a game from scratch, including writing the narrative script, building a playable MVP, and creating a comprehensive business plan, including sales and marketing strategy and technical roadmap.

ALFA APP (MOBILE APP) FOR ALFA-COLLEGE TO PREVENT COLLEGE DROPOUTS 2024

Team Project (4 people). My roles: Project Manager; Product Manager, Unity Programmer; UX Designer

Developed an app aimed at motivating students to continue their studies. Led the project from concept to delivery by gathering client requirements, designing the product, and coordinating a development team. The app received positive client feedback.

NIGHTFALL RESERVE: EXPERIENCE THE WILDERNESS, VR SIMULATION GAME 2024

Team Project (4 people). My roles: Project Manager; Level Designer; Narrative Designer; Unity Programmer

Developed from scratch a game designed to raise environmental awareness by contrasting artificial and natural forests through an immersive overnight survival experience.

GETOUT (3D UNITY), 3RD PERSON SHOOTER 2024

Project Owner (Game Designer, Unity Programmer, Visual Designer)

GetOut is the first 3D project I did on my own.The main focus during production was working with different Design Patterns, such as Hierarchical State Machine & Abstract factory.

THE RAID (3D UNITY), GAME FOR HISTORISH LEEUWARDEN MUSEUM 2023-2024

Team Project (5 people). My roles: Game Producer; Level Designer; Unity Programmer; UI/UX Designer

Based on the 1962 movie De Overval, we created a game about rescuing prisoners from a prison. In addition, I managed client communication and oversaw the entire project delivery.

EDUCATION

HANZE UNIVERSITY OF APPLIED STUDIES **2023 - 2027**
Creative Media and Game Development

IBM PROJECT MANAGER PROFESSIONAL **2025 - 2026**

REFFERENCE

HARM JAAP DE BOER, TEACHER AND PROJECT MANAGER, ALFA-COLLEGE COLLEGE

> *I was a client of Ruslan. All appointments and communication were arranged by Ruslan. He understood what was necessary. When the assignment was not clear, he was able to ask the right questions. His feedback was helpful. Smart, fresh, and independent, and in the lead.*

SKILLS

- **Main Skills:** Game Producing / Project Management; Product Management; Level Designing
- **Secondary Skills**: Presenting; Sketching; Brainstorming; Market Research; UX/UI
- **Tech Skills:** C#, Unity Engine; Git Hub; Adobe Creative Suite; Figma; Trello; Miro; Planner; Jiro; Asana
- **Soft skills**: Teamwork; Responsibility; Creativity; Flexibility; Result Oriented; Adaptive;
- **Languages:** English (fluent), Ukrainian (native), Dutch (A1/A2)

SKILLS OVERVIEW

GAME DESIGN

For each of my projects, I played a key role as one of the main Level and Narrative Designers, responsible for conceptualizing and developing unique game mechanics and overall gameplay structure. My work included identifying the target audience and understanding their needs, as well as designing levels and narratives across multiple projects. Additionally, I created a full Game Design Document (GDD) for my personal project, covering all aspects of the game's design.

PROJECT & PRODUCT MANAGEMENT

I have served as Game Producer or Team Lead across multiple teams, successfully delivering all projects with positive client feedback.
My responsibilities included managing sprint tasks, organizing meetings, setting deadlines, and coordinating work from concept to delivery. I helped define product vision, prioritize features, and align development with client needs. I also gathered and refined requirements, translating them into actionable user stories. I maintained direct communication with clients, keeping them informed through regular updates and organizing multiple meetings to ensure alignment and satisfaction.

UNITY PROGRAMMING, GITHUB PORTFOLIO & TESTING

I have also worked as a Lead Programmer and developed multiple projects using a variety of technologies, including 3D, 2D, VR, and mobile applications. Through extensive experience coding in C#, I gained knowledge of advanced design patterns, such as hierarchical state machines, which I applied in my own 3D project. I also tested all the products we developed with target audience , by using Usability Testing, and analyzed the information in the model "Elements Of User Experience by James Garrett".

RESEARCH

For all my projects, I place a strong emphasis on research, conducting both primary and secondary research to support the development process.
My primary research typically involves personal interviews with the target audience, consultations with industry professionals, and direct discussions with clients. For secondary research, I perform in-depth desk research, exploring user needs, market trends, and relevant statistics that could inform and enhance the project.

UI/UX DESIGN & SKETCHING

I contributed to the conceptualization of the UI design, ensuring it was appropriate and enjoyable for the target audience. As a gamer myself, I understand how the UI should intuitively interact with the player. I applied design heuristics to enhance user experience by providing clear feedback and making the overall gameplay more engaging and seamless.

PRESENTING & PITCHING

I've delivered multiple team presentations, client pitches, and individual presentations in front of large audiences. Additionally, during various client meetings, I was responsible for presenting our product decisions and explaining the reasoning behind our design and development choices.

BUSINESS SKILLS

I developed a full business plan for a video game project, covering the project roadmap, marketing and sales strategy, and monetization approach. This involved setting clear development milestones, identifying target audiences and promotion channels, and designing a revenue model that supports long-term growth

I WORKED WITH:

Alfa-college

HISTORISCH CENTRUM | LEEUWARDEN
